

# DCA 421 VHS FACE & SPINE LABELS

## VHS Face & Spine Labels -DCA Supplied-

Spine label

Face label

DCA Media Solutions provides exceptional turnaround time for all video duplication jobs. One of the reasons for this is our automated labeling process. The label printer utilizes a process called "thermal wax transfer." Although not capable of printing gray tones, this printer is designed specifically to reproduce razor sharp text and black and white graphics.

To submit your own label designs, see the specifications listed below.

### Specifications

- All contents of your label must be in black and white as gray tones are not supported.
- All label designs must be submitted in (.tif) file format
- All label designs must be submitted in a resolution of at least 600dpi or pixels per inch.
- Do not make a reverse out of your label design, i.e. white type on a black background. Our label media is configured in such a way that we are unable to bleed the background beyond the edges of the label.
- Do not show the label borders when you submit your designs. Just make sure that the contents fit the specified dimensions. If you have specific alignment requirements, please fax a sample.
- If you are unable to conform to any of these specifications, please contact us so that we can explore some options that can work for you.
